Percentage,				10·6	18·6		0·3

The area under hay has increased in all four provinces.

PASTURE.

The area of pasture, including mountain grazing, is returned as 11,501,020 acres in 1917, as compared with 12,436,705 acres in 1916—a decrease of 935,685 acres, due mainly to the great increase in the area of ploughed land. When considering these figures of pasture area it should be remembered always that there are certain areas which it is difficult to classify, and which one year may be returned as “grazed” land, and another year may be returned as turf bog or barren mountain; but the grazing value of these areas is small. The important increase or decrease in pasture is best measured by the extent to which the area of crops and of hay has decreased or increased, for in such a statistical inquiry as is being dealt with here the extent of the area under crops can be more exactly determined than the area of grazing land.
